

# Petite Ports...

Because One Size Does Not Fit smALL

**BARD**  
ACCESS SYSTEMS

*Advancing the Delivery of Health Care.\**

## Small Low-Profile Ports

The variety of small low-profile ports offered by Bard Access Systems fulfills the specialized placement needs of pediatric patients, cachectic patients, and patients with small body frames. These petite-sized ports provide vascular access through traditional chest placement while the small size helps to increase patient comfort. The improved access for patients benefits both the clinicians and the patients.

All of the ports are appropriate for implantation in pediatric patients and small adults and allow for a wide range of therapies.

- Bloodwork or Transfusions
- IV fluids/Hydration
- Parenteral Nutrition Solutions
- Medications
- Antibiotics

Some of the ports are specifically designed to be used during MRI.

- Materials used do not create artifacts during imaging procedures.
- Prevent image distortion during MRI.
- Eliminates interference that may affect dosage of radiation therapy.
